SUMMARY

Dedicated Backend Software Engineer with extensive experience in architecting high-performance, asynchronous RESTful APIs using Python and FastAPI. Proficient in building robust, scalable data layers with SQLAlchemy/MongoDB and integrating AI-driven solutions including production-grade RAG systems and deep learning models. Committed to optimizing system reliability, reducing latency, and streamlining infrastructure through modern DevOps practices and containerization.

EXPERIENCE

Fullstack Development Intern KeepCoders July 2025 – Oct 2025

- Architected and tested scalable RESTful API endpoints using FastAPI, significantly streamlining data exchange between client and server architectures.
- Integrated PostgreSQL databases, performing complex CRUD operations, index optimization, and query performance tuning.
- Supported the migration of legacy interface modules to a modern React-based architecture, improving application responsiveness and maintainability.
- Documented infrastructure setups and version control branching strategies, facilitating better cross-team collaboration.

PROJECTS

AI-Resume-Analyzer  [GitHub](#)

- Developed an AI-powered FastAPI backend to parse PDF resumes and evaluate job-fit against specific job descriptions using Google Gemini.
- Engineered a persistent data layer with MongoDB to archive historical analysis, providing users with a trackable feedback loop.
- Implemented user authentication and session management to provide personalized, secure career insights.

AI-Powered Inventory & Business Management System  [GitHub](#)

- Architected a full-stack inventory management platform using FastAPI, PostgreSQL, and React, providing real-time operational insights.
- Integrated AI-driven demand forecasting algorithms to automate procurement decisions, effectively reducing inventory carrying costs.
- Developed a complex, responsive analytics dashboard with Tailwind CSS to visualize real-time inventory performance metrics (KPIs).

EDUCATION

BS in Information Technology Punjab University College of IT (PUCIT) 2022 – 2026
Coursework: Data Science, Statistical Computing, Distributed Systems, Database Management, Algorithms.

SKILLS

Languages	Python, JavaScript/TypeScript, SQL, Bash
Web Tech	React, Redux, FastAPI, Tailwind CSS, RESTful APIs, Web Scraping
AI & ML	LangGraph, Vector Databases, Google Gemini API, Deep Learning (U-Net)
Databases	PostgreSQL, MongoDB, SQLAlchemy, Motor, Redis
Infrastructure	Docker, Linux Administration, CI/CD, Git, System Monitoring (Prometheus/Grafana)
